SUMMARY

Founder and Certified Scrum Product Owner with 9+ years of experience building and launching software products across product strategy, engineering, and go-to-market. Founded Taylor'd Works and created MojoDreams, an AI-powered SaaS platform, taking it from concept to launch and growing it to 500 total users, including both free registered users and paying subscribers. Personally led product decisions, full-stack development, LLM integrations, experimentation, and workflow automation. Combines strong product judgment with hands-on technical depth in Next.js, TypeScript, APIs, SQL, and cloud platforms. Comfortable working independently in ambiguous environments and turning early ideas into useful products with measurable results.

CORE SKILLS

Product: Product Strategy & Roadmapping, Feature Prioritization (MoSCoW), User Story Mapping, Release Planning, Activation/Retention/Churn Metrics, A/B Testing & Experimentation, Customer Feedback Analysis

AI Product Development: LLM Integrations (Claude, GPT), Prompt-Version Comparison, Model Selection, Output-Quality Scoring, AI Workflow Automation, AI Content Pipelines

Engineering: React, TypeScript, Next.js, C#/.NET, REST APIs, SQL, Vercel, AWS, CI/CD Pipelines, Production Support

Agile & Delivery: Scrum, Sprint Planning, Backlog Refinement, Acceptance Criteria, UAT, Cross-Functional Leadership

EXPERIENCE

Founder & Product Owner — Taylor'd Works

2020 – Present

Custom software and AI-integration studio for small businesses; creator of MojoDreams, an AI-powered journaling and self-improvement platform (launched Nov 2025).

- Took MojoDreams from concept to a base of 500 registered users, including free users and paying subscribers, by owning the full product lifecycle: customer discovery, strategy, full-stack development, LLM integration, launch, and go-to-market.
- Ran user surveys and analyzed behavioral data to identify onboarding, retention, and interpretation-quality problems, translating findings into experiments and 3 major feature iterations within the first quarter post-launch.
- Improved activation to ~63%, as measured by users reaching their first AI-generated interpretation, by redesigning onboarding and the first-entry submission experience.
- Maintained ~38% 30-day retention by using engagement data to prioritize habit-forming features (Daily Reflection, Dream Comics, and DreamSpace meditation workflows) and cutting features that didn't move retention.
- Integrated LLM services (Claude, GPT) for real-time interpretation and image visualization, improving user session engagement 25% over baseline; validated quality via 4.2/5 average customer insight ratings that fed directly into roadmap decisions.
- Improved AI interpretation quality by running prompt-version comparisons, evaluating model selection between Claude and GPT, and scoring output quality, using the results to select the prompts and models used in production.
- Built and automated the product's content operation end to end (AI content generation, AI image generation, and scheduled cross-platform publishing), writing the automation that runs the brand's social media accounts without manual steps.
- Implemented authentication, Lemon Squeezy subscription payments, and Resend transactional email, reducing onboarding drop-off and enabling monetization from day one.
- Delivered custom software and AI-integration projects for small-business clients alongside the MojoDreams product line.

Co-Founder — DataHealth LLC

2020 – 2022

Healthcare analytics software company.

- Co-founded and built software that analyzed healthcare reports and SQL code to keep reporting assets current with EPIC database schema changes, cutting manual rework for report developers.
- Identified the most commonly used tables and columns across EPIC-based reporting to guide datamart design and prioritize which data structures to build first.

Software Engineer — Cox Automotive, Irvine, CA

Sep 2020 – Mar 2026

- Partnered with product managers and stakeholders on the ProfitTime dealer platform, contributing workflow-bottleneck and usability findings to roadmap discussions and feature planning.
- Implemented analytics instrumentation and an A/B testing framework, increasing engagement-tracking coverage 15% and informing UX decisions that improved feature adoption 12%.
- Built guided vehicle appraisal workflows that let dealers capture structured vehicle and market data efficiently, contributing to a measurable reduction in data-entry errors.
- Built a shared React/Stencil component library adopted across multiple product teams, reducing UI development time for new features 20%.
- Reduced mean time to resolution 15% and maintained 99.9% uptime on core dealer-facing services through on-call rotation and incident-response leadership; cut average deployment time 25% by consolidating CI/CD pipelines.

Software Engineer | Product Owner — Oden Industries, San Bernardino, CA

Mar 2016 – Sep 2020

- Owned product requirements and backlog priorities for SmartShip, ODS, and PlaniTrac across 3+ major product builds, partnering directly with customers to define user stories and align releases with business needs.
- Led two development teams, mobile and desktop, coordinating backlog priorities, sprint delivery, and release timing across both platforms.
- Architected and led development of PlaniTrac, a real-time emergency-management platform with live messaging, mapping, and resource tracking supporting medical and regional command centers.
- Redesigned customer-facing workflows to cut manual process steps an estimated 15–20% across shipment tracking, operational reporting, and critical incident management.
- Led UAT, customer feedback, and release validation cycles, reducing regression-related bugs 25%; prioritized reliability work that cut production errors 30% and MTTR 40%.
- Applied MoSCoW prioritization and user story mapping to ship the highest-value features each sprint; mentored engineers on Agile delivery practices.

EDUCATION

B.S. Computer Science, California State University, San Bernardino

A.S. Computer Information Systems, Victor Valley College

CERTIFICATIONS

Certified Scrum Product Owner (CSPO), Scrum Alliance
